

# Artem Sidnev

Middle Backend / DevOps Engineer

a.sidnevart@gmail.com   t.me/sidnevart   github.com/sidnevart

## Summary

Middle Backend / DevOps engineer at T-Bank. I build high-load systems, data platforms, and practical AI/LLM automation. Strongest where reliability, critical-flow speed, and measurable business impact matter.

## Work Experience

### T-Bank

2025 – present

*Middle Backend / DevOps Engineer*

- Build and scale a cashback offer targeting platform for managers (audiences over 1.5 years of history and 30M transactions/day).
- Accelerated a critical production audience-building flow by 5x after migration and optimizations.
- Reduced diagnosis time for common issues by 20–40 minutes with early validation and clearer errors.
- Automated manager routines: minus 10–15 minutes per run and up to 40–60 manual hours per month.
- Implemented AI code review in GitLab and an AI CI job for automated refactoring and MR prep.
- Built n8n automations and a RAG onboarding agent: AI workflows 1.5x faster, token usage down up to 3x.

## Key Projects

- Cashback Offer Targeting Platform (big-tech internal product).
- AI Automation for Internal Workflows (GitLab AI review, AI CI, n8n, RAG onboarding).
- Commercial Real Estate Analytics (auctions + market comparables + Telegram delivery).
- Personalized Mobile Banking Chat (Rust, transaction-based personalization).

## Stack

Languages: Java, Kotlin, Go, Rust, TypeScript

Data & Messaging: PostgreSQL, ClickHouse, Redis, Kafka

Focus: high-load systems, data pipelines, AI automation, integrations
