Summary

Backend & Platform Engineer (Java, Kotlin, Go) with 4+ years of experience in high-load systems and Big Data pipelines. Technical Lead for the Customer Data Platform (CDP), where I architected a processing system that boosted revenue by ~\$1.8M/year and accelerated data gathering 40×. Proven track record in deploying AI solutions (LLM, RAG) and building resilient architectures (ClickHouse, Kafka, gRPC) focused on clear business impact.

Core Skills

Languages: Java, Kotlin, Python, Go, SQL

Technologies: Spring Boot, gRPC, REST, microservices, PostgreSQL, ClickHouse, CHaaS (ClickHouse-as-a-Service), Kafka, Redis, S3

Tools: Docker, Kubernetes, GitLab CI/CD, Prometheus, Grafana, OpenTelemetry, nginx

Experience

Software Engineer | Tinkoff Bank

Oct 2025 – Present

Customer Data Platform (CDP): marketing-audience management for cashback offers (in-house AdTech) — selecting customers for partner campaigns from transaction, customer, and partner data.

- **Accelerated audience gathering 40–50×** (from 6 min to 1–10 s), driving ~\$150K/mo in additional revenue. Single-handedly architected the DAG pipelines in **Kotlin**, enabling instant processing of any data volume via **CHaaS**.
- **Technical Lead for the CDP integration** (2 teams, 9 engineers): spearheaded the architectural design (**RFC**) and implemented a dual-layer system — control-plane (**Kotlin / Spring Boot**) and data-plane (**Go**, gRPC, S3). Accelerated data delivery **32×** (from 8 h to 15 min), enabled same-day campaign launches, and consolidated an adjacent team into the CDP while achieving **99.9%** process reliability through idempotency and resiliency patterns.
- **Engineered a high-load pipeline processing ~30M transactions/day** via **Kafka** and **ClickHouse** over 1.5 years of historical data; a targeting system built on this foundation generated ~\$165K in annual profit.
- **Cut critical-scenario runtime 5×** by building a quantitative latency model and end-to-end pipeline observability; optimized the critical path by migrating compute to **CHaaS**.
- **Save managers up to 60 working hours/month** by automating data checks and region setup; sped up the main **GitLab CI/CD** test pipelines by **20%**.

Software Engineer (contract) | PropTech Client (NDA)

Aug 2024 – Aug 2025

Real estate analytics platform for residential rental and sales.

- Built a real-estate analytics platform: auction & CIAN parsing, geocoding, a searchable property catalog, a Telegram bot, and an admin panel, with per-property economics (Python, FastAPI, PostgreSQL, Redis).
- **Reduced first-pass property valuation to ~10 min** and district analysis to 7–10 min: realtors and investors see price, yield, cash flow, and payback without manually cross-checking multiple sources.

Freelance Software Engineer | Client Projects

May 2022 – Aug 2024

Booking, loyalty, and automation services for small and service businesses — from MVP to production, sole ownership of stack and delivery.

- **Built an MVP solo in ~3 months that helped the client raise investment:** a Telegram Mini App for service booking — slot discovery and **2-tap booking** instead of a phone call, plus customer, partner, and admin cabinets. Stack: **Python** (FastAPI), a **Go** background-processing/notifications service, PostgreSQL, Redis, React; Docker / nginx deploy, CI/CD.
- For a billiards club, moved booking from phone calls into a Telegram Mini App (**+25% conversion**): **YClients** integration (create / cancel / reschedule), contact-based registration, plus an **Elo** match system with idempotent loyalty bonuses that **saved the admin ~15 h/month**.

Education

Russian New University | B.Sc. in Computer Science | Expected 2028

Relevant coursework: algorithms & data structures, databases, distributed systems, software design. *Studying alongside full-time work at Tinkoff Bank.*
